

Your Complete Security  
Solutions Provider

# Company Introduction

# About Us

Short version

## Who we are

We are an exporter and distributor of security solutions including CCTV, Fire, Gas Detection, Network Solutions, and Other.

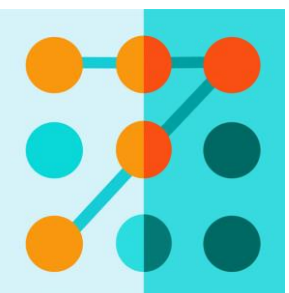

TSE is a Miami-based exporter of CCTV, Security, and Fire systems. We established our operations in 2017, and we have successfully sold and implemented major projects and key solutions in over 20 countries.

## What we do

With over 20 years of experience, our team has worked and implemented Security Solutions worldwide.

We focus our approach by understanding what our customers require, and we go beyond their expectations through unparalleled customer support, continuous communication, and top-quality products.

Our profound beliefs

# Company Core Values

## Long-Term Partnerships

Rome was not built in a day and at TSE, we look to develop long-term partnerships with our customers and vendors in which all parties will benefit from their work, expertise, and honesty.

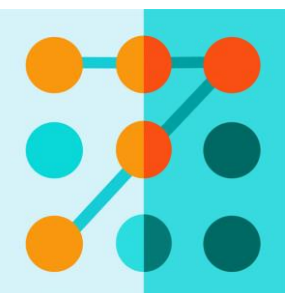

## Transparent Communication

We develop trust with our customers and manufacturing partners through open and transparent communication. This is the only way to build the long-term partnerships we strive to create.

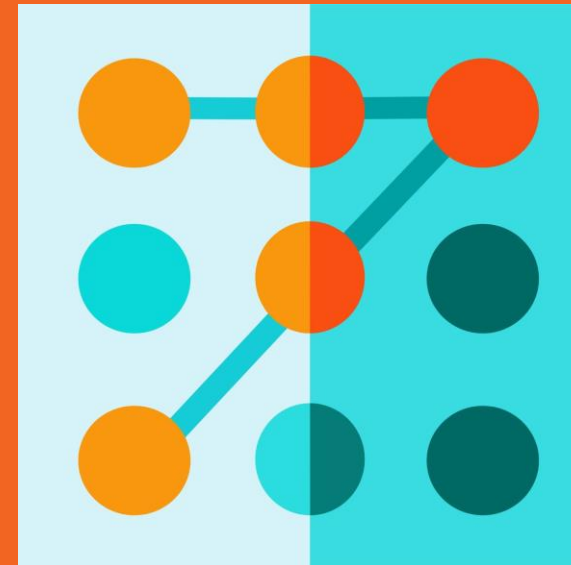

## Excellence in Customer Service

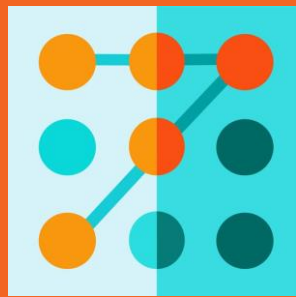

Nothing gives us greater satisfaction than the positive feedback our customers give us for the work and effort we do for them. Customer Service is the third most significant pillar in our company values.

# Our Product Portfolio

We are committed to offering only the highest-performing products from top-quality manufacturers.

# Network Systems

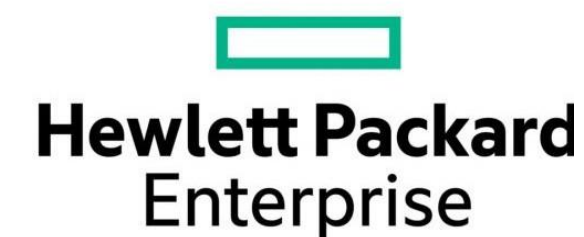

## TSE- Network Systems Solutions

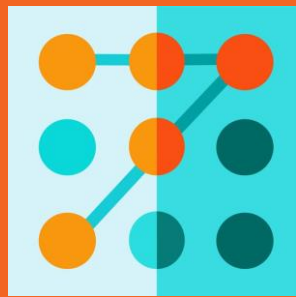

Today's fast-paced work environment demands a quick response, seamless collaboration, and productivity regardless of the organization's size.

That is why installing a networking solution that accesses, controls, maintains, and communicates between different workstations, servers, computers, and cameras has become a necessity and an asset.

We provide a full scope of Networking Systems, including the platform and software, storage, and the necessary accessories & hardware.

## Our Vendor Partners

# Network Infrastructure

## TSE- Network Infrastructure Solutions

Network infrastructure refers to all resources that allow connectivity, management, business operations, and communication between the different devices linked in the network. Network infrastructure comprises hardware, systems, and devices.

Everything in the network, from servers to wireless routers, is part of a system's infrastructure.

There are several challenges in building and running a network infrastructure model. Some of the top three network infrastructure challenges are:

- Centralizing traffic
- Managing duplicate data
- Sending the correct data to the right tool

At TSE, we help you analyze, design, and create the optimal network infrastructure for your business.

# IP Video Surveillance

## TSE- IP Video Surveillance

Whether installing a new system, updating an existing one, or expanding your current security needs, we can help you. Not all security products and brands are the same, and there isn't a cookie-cutter solution that applies to every business, and we know this. With our experience and knowledge, we can find and tailor the security system that will meet your needs and be the perfect fit for your budget.

## Our Vendor Partners

# Server Storage & Data

## TSE- Server Storage and Data

TSE offers complete Storage-Serve Data Solutions, including Direct-Attached Storage, Network Attached Storage, and Storage Area Networks.

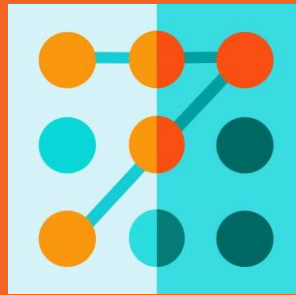

Understanding what solution best fits your needs can be a daunting task. That is why we are here to help.

TSE offers project consultation, bandwidth, storage calculations, and architecture design support for each storage project guaranteeing an optimized and efficient solution to meet your requirements and expectations.

## Our Vendor Partners

# Fire Protection Systems

## TSE- Fire Protection Systems

The fire-protection system design considers many factors, such as building use, occupancy, and any previously installed system. As a result, each design is unique to each building.

Each fire system has three essential components: Detection, Alarms & Notification, and Suppression.

These components must seamlessly work together to detect effectively, contain, control, and extinguish a fire in its early stages. Additionally, they must be able to continue operating during the fire.

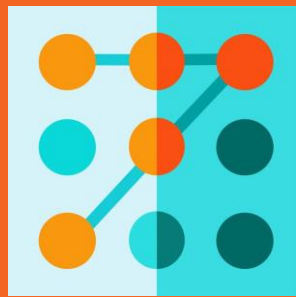

We will help you design, purchase, and implement your fire protection system; and provide excellent customer service support even after project completion.

## Our Vendor Partners

Specialized Fire Products

# Fire Protection Systems- Accesories

## TSE- Fire Protection Systems Accesories

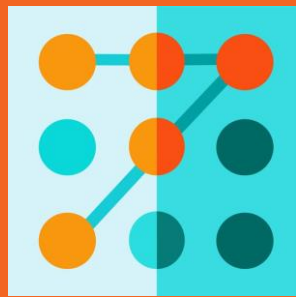

A Fire System is only complete with the necessary accessories, including lighting systems and batteries. In the event of a Fire, the electrical power might be shut off in some instances, and that is when dependable, long-life batteries come into play to execute proper light and sound signaling to protect human life.

Likewise, signaling is also a key component in a full-running fire protection system. Signaling includes visual signals, audible signals, public address systems, intercoms, and others.

TSE offers top-notch products from renowned manufacturers to ensure your Fire Protection System provides the most complete and safest solution.

## Our Vendor Partners

# Gas Detection

## TSE- Gas Detection

Dangerous gases like carbon monoxide can be odorless and colorless; if they go undetected, the outcome is tragic. Gas Detection may often be undermined during project planning, but its importance is paramount.

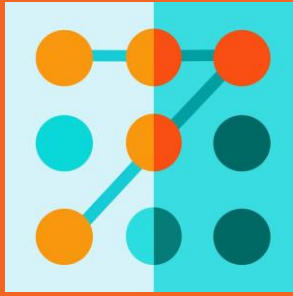

A gas monitoring system can alert opportunely if dangerous levels of gases are detected so appropriate action is taken to help prevent explosions and other possible hazards to human life and property.

TSE partners with only the best to offer you a solid, reliable, cost-effective solution for your gas detection needs.

GAS DETECTION

# Access Control & Time Attendance

## TSE- Access Control & Time Attendance

For any organization, people are considered the most valuable asset. For this reason, Access Control is an invaluable tool to limit and guard access to offices, factories, and any other workplace environment.

Similarly, people's work time is also a valuable resource. Time-attendance policies, including biometric machines for attendance, are a great solution to help track and monitor time management.

## Our Vendor Partners

# Security Intrusion Alarm Systems

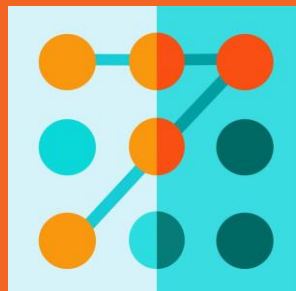

## TSE- Security Intrusion Alarm Systems

Intrusion alarm systems aim to monitor and detect unauthorized access to a building. The fundamental purpose of an intrusion alarm system is to protect from burglary, vandalism, and property damage and, of course, ensure the security of the individuals inside the building.

With our experience and knowledge, we can assist you in designing the Security Intrusion Alarm System that will meet your needs and budget.

## Our Vendor Partners

# Metal Detection

## TSE- Metal Detection

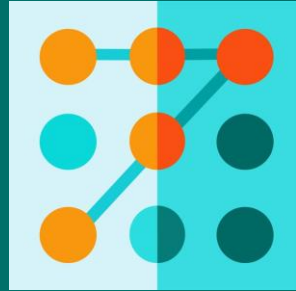

Security has become increasingly important at events and around high traffic and essential locations such as airports, courthouses, and offices.

Security metal detectors are crucial in ensuring safety by detecting concealed weapons such as guns or knives. They are also helpful in detecting foil-wrapped drugs and precious metals associated with jewelry or antique theft. The sensitivity of security metal detectors is calibrated to avoid false alarms due to small metal objects such as jewelry or small change.

At TSE, we offer an extensive array of metal detection solutions, including walk-through metal detectors and handheld metal detectors or security wands.

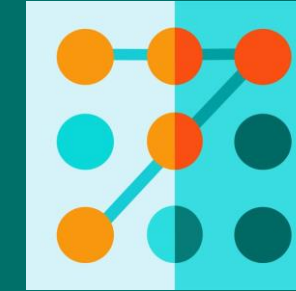

## Our Vendor Partners

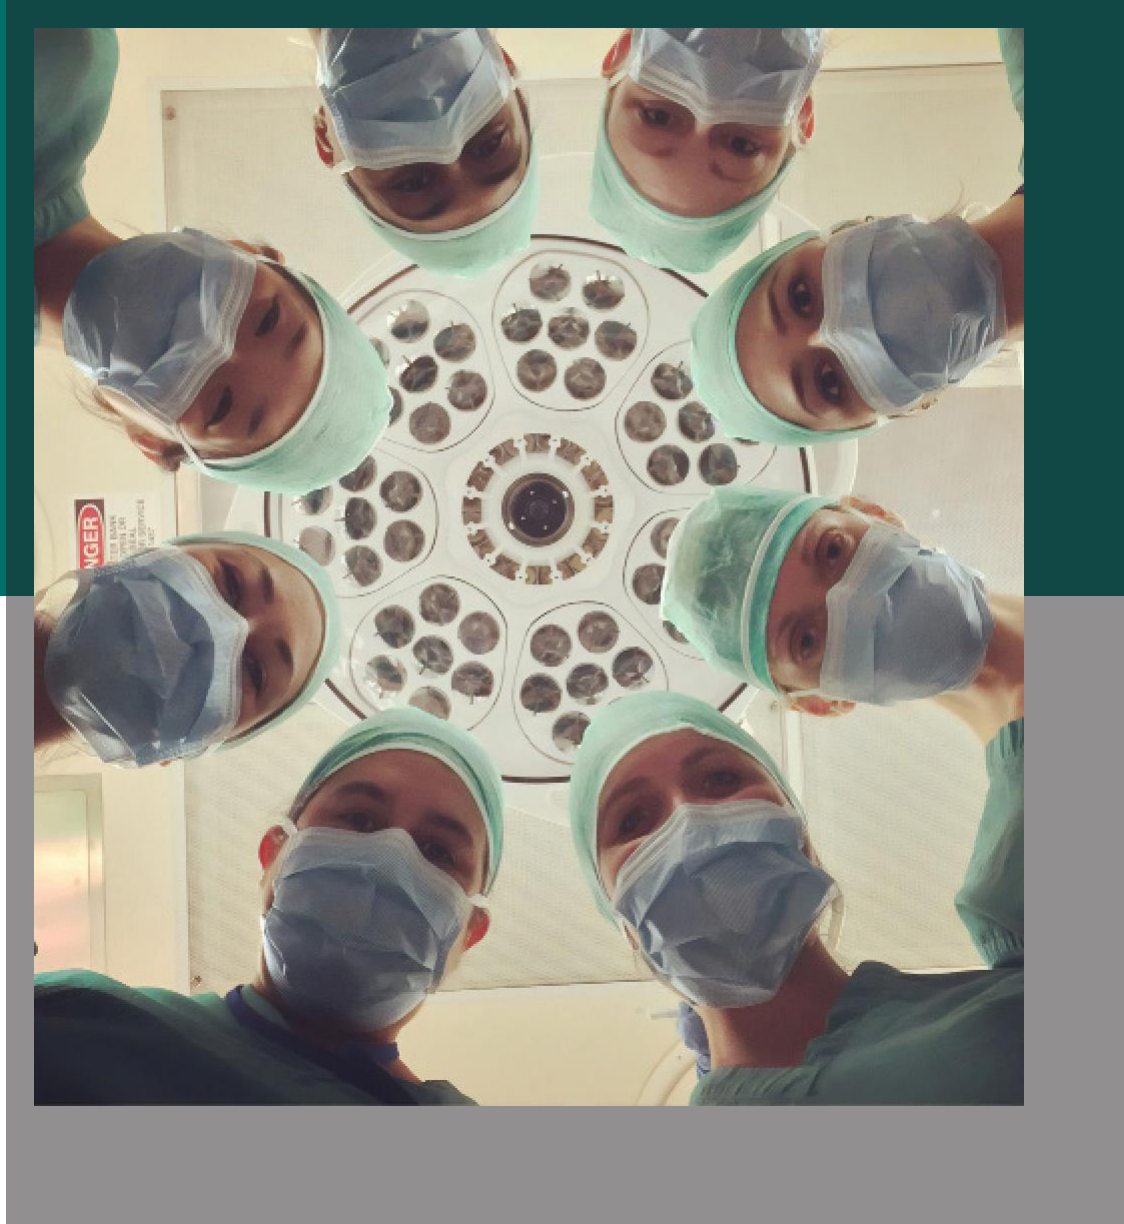

# Industries

Projects we have worked on with many more to follow!

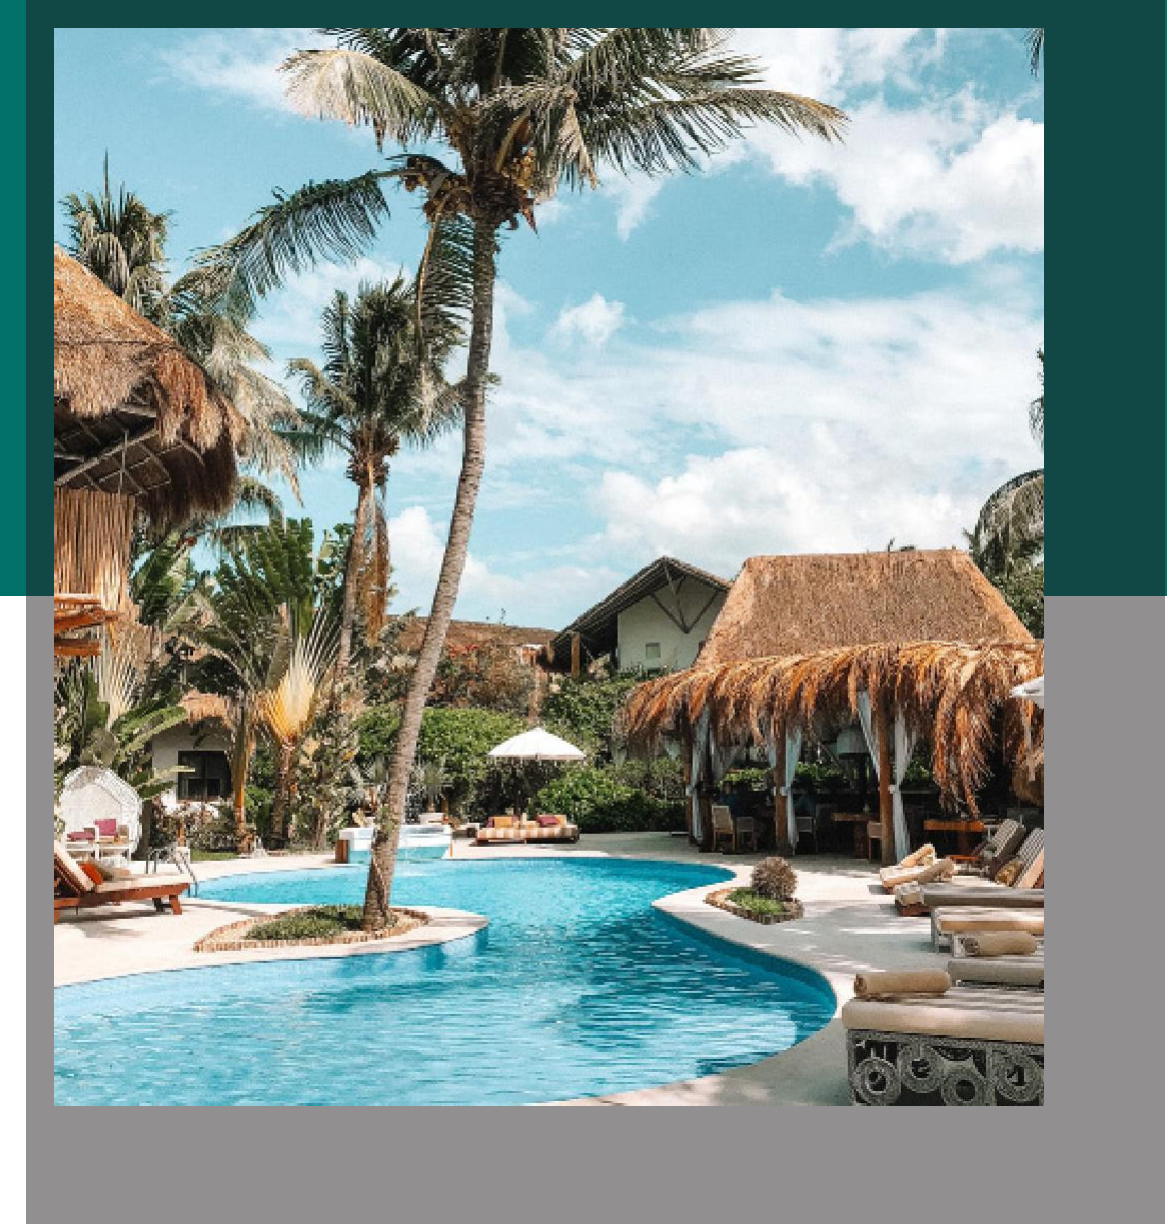

## 01 Ports & Utility Companies

We have designed and installed IP Video Surveillance, Networking Infrastructure (Fiber & Copper), and Fire Detection solutions for ports, utility companies, and government buildings.

## 02 Hospitals

We have provided IP Video Surveillance, Networking Infrastructure (both Fiber & Copper), and Fire Detection solutions for several hospitals.

## 03 Hotels & Retail Businesses

For Hotels & Retail, we have successfully provided solutions for IP Surveillance projects and Network Infrastructure and Fire Detection.

# Thank you!
